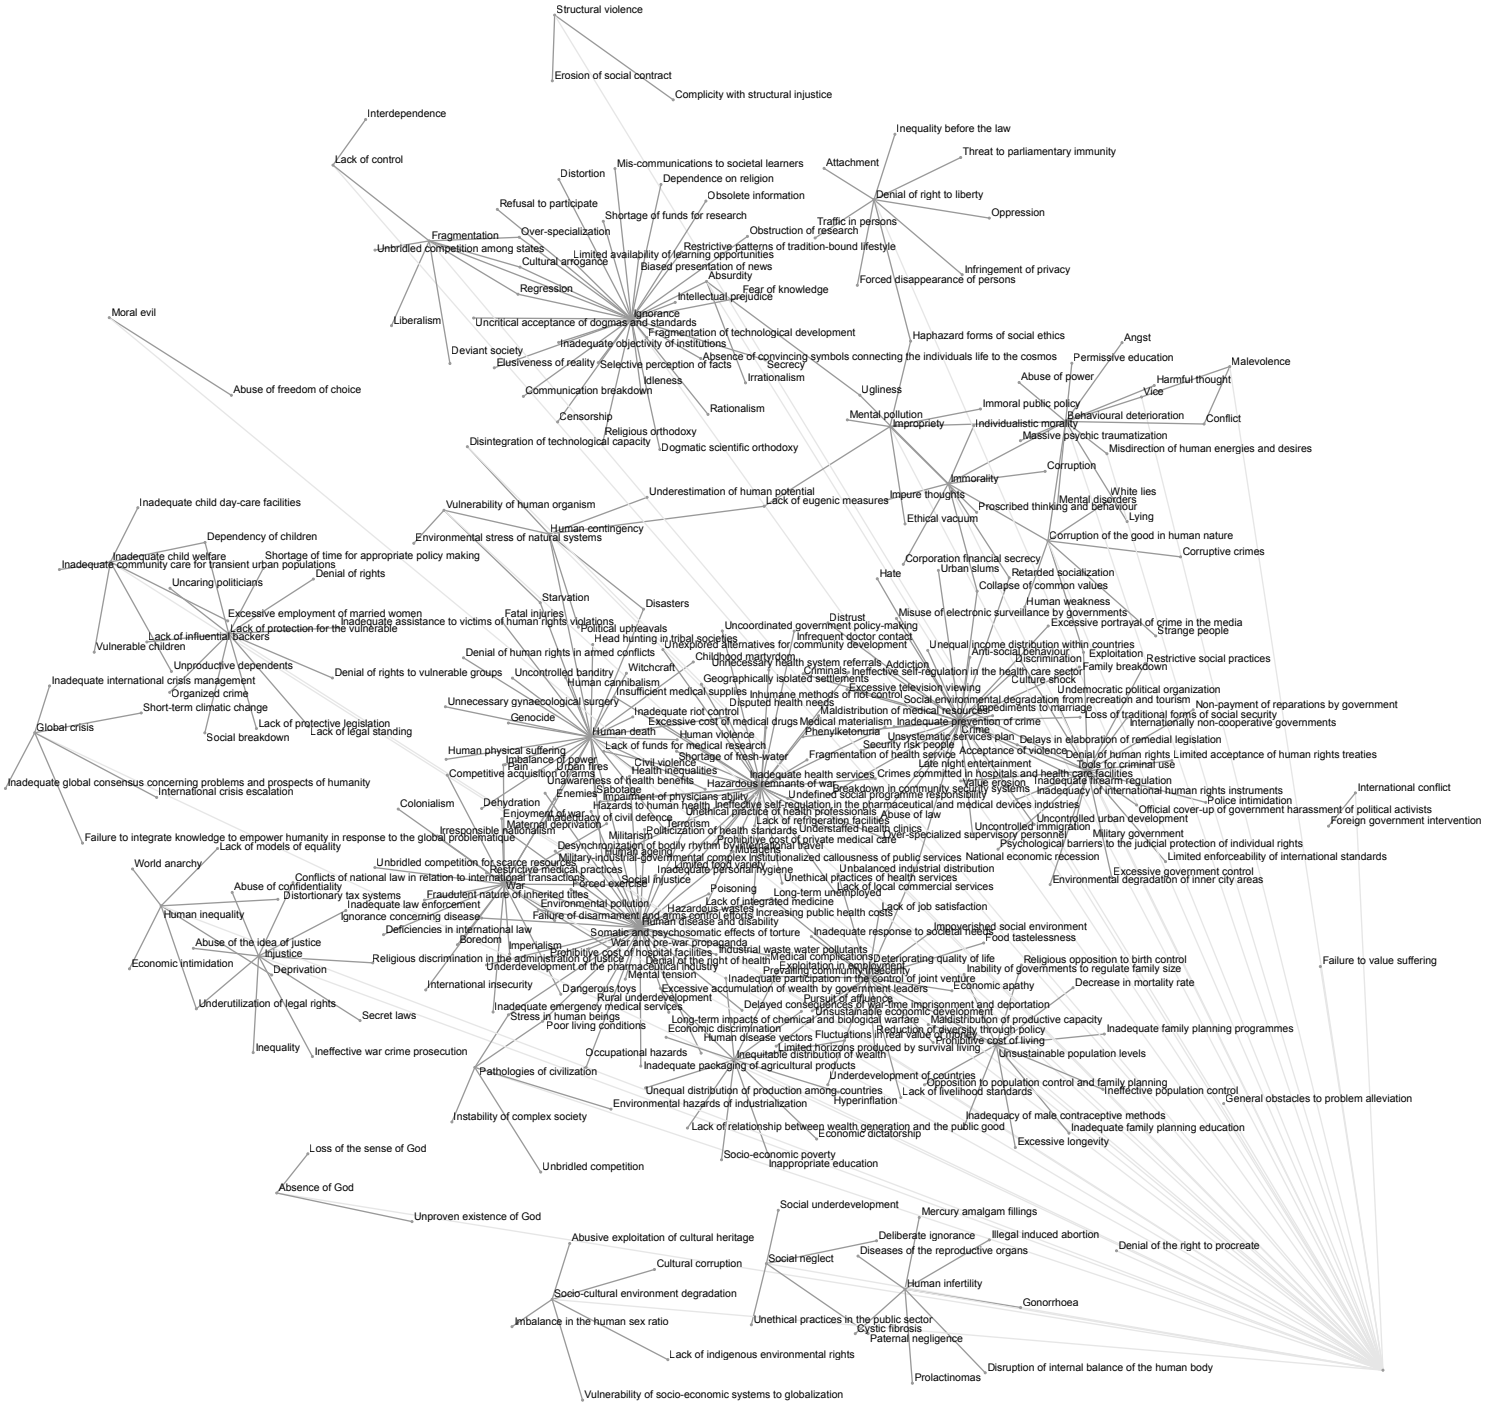
Map of relationships between 351 world problems related to human suffering



Generated from the World Problems database of the *Encyclopedia of World Problems and Human Potential.* This is the result of an ambitious effort, since 1972, to collect and present information from international constituencies on the problems with which humanity perceives itself to be confronted. It aims to clarify the challenges such problems represent to concepts, values and development strategies. The Encyclopedia encourages the discovery of a new conceptual dynamic for understanding and action, sufficiently complex to encompass the factions, conflicts and paradigms by which people are separated - both from each other and from a promising future.
